DETAILED ACTION**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Lamming on 8/15/2007.

The application has been amended as follows:

1.1 **Cancel** Claims 1-10,14,15 and 28-61.

1.2 In Claim 11, line 1, **delete** "in Figure 2" and in lines 11-12, **delete** and **replace** with --Q is selected from a multivalent group consisting of arylamines, silanes, siloxanes, alkynylene groups and heteroalkynylene groups, or from Formulae IV(d)-IV(f):

**IV(d)****IV(e)**

Art Unit: 1751

IV(f)

--.

1.3 In Claim 12, line 4, **delete** "with the proviso that when Q is a single bond, p is 0. "

and in line 3, **replace** ";" with --.--

1.4 In Claim 16, **delete** and **replace** with --The composition of Claim 11 wherein Q is selected from Formulae IV(g) and IV(h):

IV(g)

IV(h)

--.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The most pertinent prior art known to the Examiner is listed on the attached PTO-892 and 1449 forms. Nakamura et al. (JP 07-026255) disclosed a biquinoxaline structure containing a variety of linking groups defined by the variable group "Z". However, none of the "Z" groups as defined in the Abstract read on the Markush group of linking groups disclosed in Claim 11. Papir (US Patent 4579679) teaches electroactive polymers made from quinoxaline containing monomers that further teach alkynylene linking groups between the quinoxaline moieties (Column 33, Claim 11). However, the reference teaches that the linking groups are attached to quinoxaline moieties through two different positions on the quinoxaline moieties, which are different from the instant Claims since the quinoxaline moieties attach to the linking group through one position only. Beilstein Record No. 8797439 shows two quinoxaline structures linked together by a structure containing a benzene ring and two alkynyl groups. However, the attachment points of the linking group to the quinoxaline structures are different from those in the instant Claims. Further there is no teaching, suggestion or motivation to attach pendant quinoxaline groups to a variable group Q as defined in Claim 11, Formula II. Accordingly, the claimed invention, as a whole, would not have been obvious to one of ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
